

SR 520 Bridge Replacement and HOV Program

I-5 to Medina: Bridge Replacement and HOV Project

Crews begin work for pier for new floating bridge in Lake Washington near Seattle

Beginning Aug. 28, WSDOT and its contractor, Kiewit/General/Manson, a Joint Venture (KGM), will conduct daytime vibratory installation of large casings to support a pier for the new SR 520 floating bridge. Barge cranes will sink the casings into the lake bed and then fill them with concrete. The casing work will be performed north of the existing bridge, about 500-700 feet from Webster Point. The work may last until Oct. 4.

Crews will typically work Monday through Friday from 7 a.m. to 7 p.m. and on two Saturdays in September, from 9 a.m. to 7 p.m. to complete the work. Concrete pours may extend past 10 p.m. and into the early morning hours for up to four nights throughout the work duration.

Residents near the floating bridge should expect to see large crane barges and other support vessels when crews perform the work. Concrete trucks and pumps will be on the barges supplying materials for the pilings. Residents may hear noise from generators, cranes, power and vibratory equipment, concrete pumps, motors and backup equipment. WSDOT and KGM will ensure this work, which could last until Oct. 4, does not exceed allowable decibel levels. This work is covered by a City of Seattle temporary noise variance.
